

SUCCESS STORY

COLOPL Inc. Reduces Investigation Time with Carbon Black

INDUSTRY

Software & Internet

COMPANY SIZE

900+ employees

SECURITY CHALLENGES

- + Lack of visibility
- + Increased number of security events

PRODUCT

CB Response Cloud

KEY BENEFITS

- + Ease of use for small team
- + Reduced investigation time

Summary

COLOPL Inc. was founded in 2008 in Japan as a game provider. Today their primary business focuses on building native smartphone gaming applications, with titles among the top in the Apple App Store and Google Play Store. With such a large user base, COLOPL strives to maintain the strongest possible security strategy. After deploying Carbon Black, the security team at COLOPL has been able to proactively detect advanced threats and reduce time spent on investigations to mere seconds.

Faster Detection and Repsonse

Responsible for COLOPL's security strategy, security engineer Shuichiro Shimizu had long been in search of a better endpoint solution for the company's detection and response capabilities. With the number of security events they were experiencing, they needed better visibility so the team could move faster to proactively protect their diverse endpoint environment. They evaluated several products and ultimately chose Carbon Black's industry-leading incident response and threat hunting solution. The team found the product easy to manage and run, and were able to deploy quickly.

With the product in place, the security team has drastically increased their efficiency. "Carbon Black significantly reduces the time spent on investigations down to an instant," said Shimizu. "The UI allows us to quickly understand behaviors and we are able to manage our security operations with a small team."

Staying Ahead of Threats

As COLOPL continues to launch new mobile applications, the threat landscape continues to evolve as well. The biggest benefit that Shimizu

“Carbon Black significantly reduces the time spent on investigations down to an instant.”

and his team have seen from Carbon Black is the ability to stay a step ahead of advanced attacks. “We are able to not only detect threats but uncover very targeted attacks,” said Shimizu. “I could not imagine life without Carbon Black.”

Conclusion

As the company looks to the future, COLOPL will continue to grow their entertainment business and evolve with the pace of technology. In fact, the company is beginning to offer applications for virtual reality devices. As the industry grows, so too will the need for a fortified endpoint detection and response solution. Shimizu and his team feel confident that Carbon Black is the product best suited for COLOPL’s diverse environment.
