

vRealize Network Insight Cloud for VMware Cloud on AWS

Migrate, Secure, Manage, and Scale

90%
time savings
in implementing
micro-segmentation*

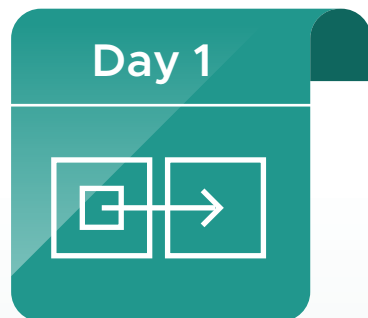

50%
improvement
in OpEx*

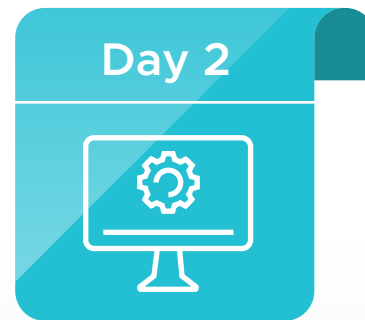

Plan App Migration

- Identify top talkers on-prem services, applications and end points
- Discover applications and their tiers
- Map application dependencies
- Plan your migration and determine impacts for smooth migrations

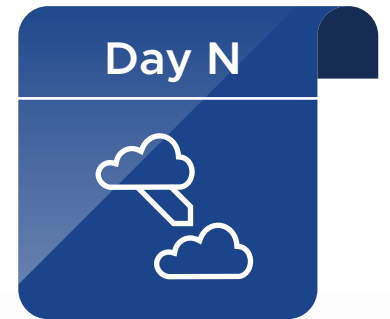

Plan & Deploy Security

- Identify critical applications in VMC
- Map application dependencies, including hybrid applications
- Get firewall rules recommendations for applications and import into NSX Policy Manager

Manage & Scale

- Troubleshoot application flows blocked by the NSX firewall
- Optimize and troubleshoot application networking and security, including hybrid applications
- Visibility into flows, security groups, VMs and all other networking entities in VMC

Extend & Troubleshoot

- Plan application security for native and/or hybrid applications
- Troubleshoot security and networking between VMs in VMC and on-prem, or other public clouds.
- Consistent visibility across clouds

* Based on an assessment from a large media firm.

Why vRealize Network Insight Cloud Enterprise Features, More Cost Effective
