

The Top 10 AI Superpowers Driving Jira Service Management

Jira Service Management delivers the best AI advancements of the Atlassian platform – which means customers need very little time to start realizing value. These AI superpowers are live now or coming soon. They come in two different varieties: proactive AI experiences built directly into the platform and specialized AI agents that help with IT services, employee support, HR service management, and more.

1. The employee help center gets a glow up.

Your revamped HR help center puts resources front and center. Employees can now find what they need faster.

2. Lock it down: simplified access controls.

Sensitive HR requests? No problem. Simplified access controls ensure confidential info stays secure while the right people get what they need.

3. Seamless HR integrations for effortless support.

Connect Jira Service Management with popular HR apps like Workday and Okta. Streamlined support and smoother workflows? Yes, please.

4. Your AI-Powered people partner.

Onboarding, offboarding, and everything in between just got easier. With AI-generated request types and templates, HR teams can set up service desks faster than ever.

5. A personal coach for your help desk.

Virtual service agent now comes with an AI-powered dashboard showing performance stats and knowledge gaps. Plus, it'll suggest new articles to fill those gaps.

6. Instant clarity.

AI-generated summaries now deliver employee request overviews, recommended next steps, and even one-click action buttons. Less clicking, more solving.

7. Multilingual magic.

The virtual service agent now supports all major languages, ensuring employees around the world get the help they need.

8. Employee support, anywhere you work.

Slack? Teams? Email? Web widget? Help Center? Wherever your employees are, the virtual service agent is ready to help.

9. Meet your Agentic (or AI Agent) sidekick.

From identifying root causes to crafting Post-Incident Reviews, new AI agents do the heavy lifting so your team can focus on the big picture.

10. IT operations, enhanced!

When incidents happen, AI surfaces past incidents, priority levels, change risks, and even suggests the best responders.
