VMWARE HORIZON CLOUD SERVICE

AT A GLANCE

The VMware Horizon® Cloud Service™ if delivers feature-rich virtual desktops and applications using a purpose-built cloud platform that is scalable across multiple deployment options, including fully managed infrastructure from VMware, public cloud infrastructure from Microsoft Azure, or on-premises hyper-converged infrastructure (HCI). The service supports a cloud-scale architecture that makes it easy to deliver virtualized Windows desktops and applications to any device, anytime. And, with a flexible subscription model and turnkey solutions, organizations can easily get up and running and scale quickly.

Reimagining Virtual Desktops and Apps

Today, deploying virtual desktops and applications can be a rigorous process if organizations are not using the right tools. Even within the best run IT organizations, setting up a complete VDI environment can take several days and sometimes weeks with multiple servers/VMs to be installed and configured, networking policies implemented and applications and desktops managed. The pain is not a one-time thing – ongoing management of multiple moving parts means long maintenance windows and a lot of time needs to be set aside to design and scale the environments. Almost all environments are over-provisioned, leading to higher costs.

Drawing on the best of mobile and the cloud, VMware Horizon® Cloud Service™ provides unprecedented simplicity, flexibility, speed and scale with a predictable pay-as-you-grow model. Horizon Cloud customers enjoy an intuitive, cloud-hosted management control plane that is always up-to-date with the latest features and the flexibility to decide where their desktops and applications reside, either in the cloud with managed infrastructure from VMware or on-premises with hyper-converged infrastructure appliances.
