

LOW-TOUCH NO-TOUCH

DEPLOYMENTS FOR PC AND MAC

IBM MaaS360 | With Watson™

unified endpoint management (UEM)
is designed to help you save time and
raise productivity

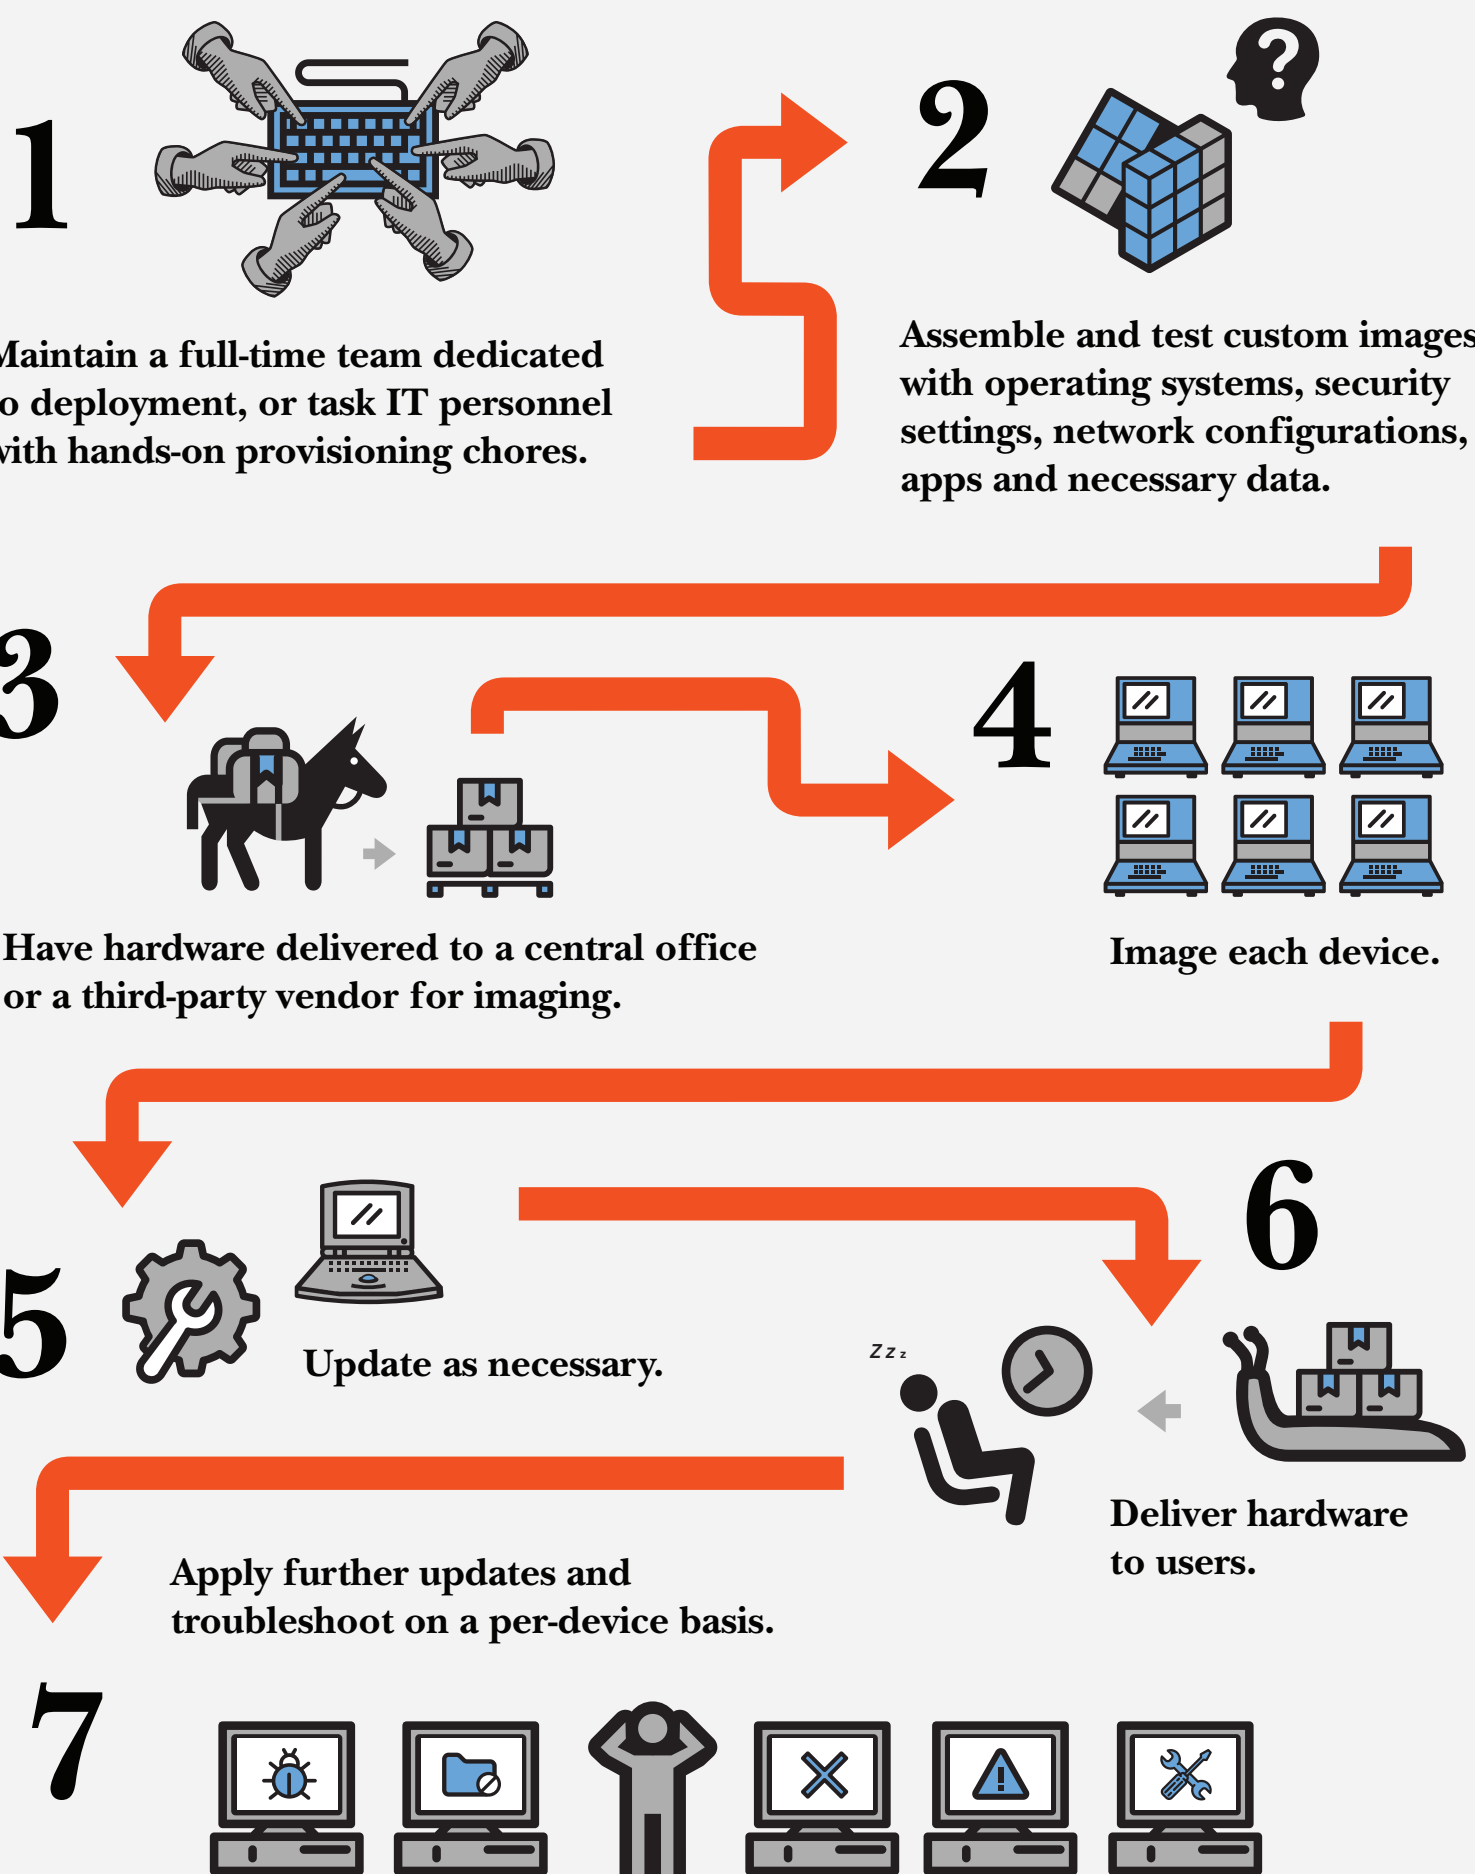

Enterprise IT departments know that high-touch deployment of new devices is a major drag. Provisioning *one* new laptop or desktop with all the network details, user settings, applications (apps) and baseline data that it needs—and then keeping it up to date and secure—might be easy for your IT department. But what about dozens of them? Hundreds? Even thousands?

If your enterprise is creating custom images and installing them one-by-one on new end-user devices before they can reach your employees, you're missing out on the advanced capabilities of Microsoft Windows 10 and Apple macOS that can help streamline deployment.

Will you continue the old-fashioned approach? Or are you ready to *modernize*?

With no-touch, drop-ship delivery for Windows 10 and macOS, you can reduce your team's need to assemble custom images, or to physically handle hardware for configuration or updates. Forego the heavy lifting, drop your outdated tools, and begin to cut costs and free up resources.

THE OLD-FASHIONED WAY

THE THREE-STEP MODERN APPROACH

Ship hardware with stock operating system to user—no up-front custom imaging required.

Join the enterprise network by logging on with corporate credentials. No fuss!

Let users take advantage of a self-service experience! Automatically provision devices over the air (OTA)—or over the network—and deliver instant-on access to data and software, email, Wi-Fi networks, virtual private network connections and certificates, and single sign-on to a unified catalog of approved software.

LOOK MA, NO HANDS!

With the powerful combination of IBM® MaaS360® with Watson™ and client management tools such as IBM BigFix®, upgrades and updates can be rolled out automatically for the latest security patches and performance improvements.

Corporate infrastructure revamped? New settings can be rolled out smoothly to users with OTA updates to security and networking configurations, and post deployment, you can consolidate management of new Windows 10 and legacy systems.

Want to streamline deployment with low-touch or no-touch rollouts for your Windows 10 and macOS desktops and laptops? Deliver a consistent “PC-as-a-service” and “bring-your-own” experience for PC and Mac.
